

# Support your goals with data-backed health and business decisions

athenahealth Data View provides direct access to clinical and financial data, optimized for analytics and bulk extraction—a robust foundation for your reporting needs

athenahealth partners with healthcare organizations of all sizes, providing technology, insights, and expertise to help them drive better clinical and financial results.

## Use Data View for these use cases, and other business priorities

- Analyze patient populations and proactively close care gaps
- Manage reporting for government bonus programs and shared risk contracts
- Forecast schedule density and run retroactive reports
- Deliver insights that support the pursuit of alternative payment models

The shift to value-based care and the diversification of care models have made it more critical than ever to have a comprehensive data and reporting strategy. With the help of Data View, you can quickly, reliably mine and analyze athenaOne clinical and financial data to gain insight into your performance and surface opportunities to drive better health and business outcomes.

### Sharpen your insights, with infrastructure and data structure optimized for analytics

At the core of Data View is Snowflake, an industry-leading, massively parallel processing database that's highly scalable, secure, and HIPAA compliant. athenaOne data is structured to enable ease of analysis, without sacrificing flexibility.

- Analyze efficiently, with pre-scrubbed and formatted data and a well-documented data structure
- Access and explore a comprehensive data set of almost 400 tables
- Use our standard library of query templates or create your own, for faster answers to common questions
- Request new tables or queries when you need them — athenahealth product development teams are consistently adding new content

### Explore and format data your way

Data View was created with flexibility in mind. Query your data and produce outputs in our browser-based SQL editor or a business intelligence tool, or pipe data directly into an enterprise data warehouse to combine datasets across your organization.

- Enjoy simple, efficient analysis, no matter what your organization's setup
- Use SQL to directly query data, eliminating the need to invest in additional tools or infrastructure
- Easily connect a business intelligence tool, data warehouse, or cloud service to the backend of our data store, using standard database connectors (ODBC, JDBC, Python, etc.)
- Create custom schema, tables, and information from views available within Data View

### Deliver tailored analytics solutions for your organization, faster

Empower your analytics teams with a customized analytics solution for your organization. athenahealth's Consulting Services can help you build it.

- Partner with our teams to determine and build a solution that best achieves your goals, including bringing in external data to combine with Data View
- Reduce the burden on your analytics teams by automating and streamlining your reporting processes
- Ease report development, data mapping, data validation, and distribution to your users
